
(a) A PROMPT, READ AS BAYESIAN INFERENCE
description: w ≈ m
x1, y1
x2, y2
· · ·
xn, yn
x ?
a noisy report of the task w
demonstrations that update the posterior
predict y
THE DESCRIPTION'S ESS
description
=
x1, y1
· · ·
xk, yk
k = ESS: the number of demonstrations that lower regret as much as the description does
(b) PRIOR ON w
ESS (DEMONSTRATIONS)
each is one demonstration
m
loose, reliable
r = 0.1, p = 1
15.6
7.5× the ESS
specific, reliable
r = 0.001, p = 1
117
specific, 90% reliable
r = 0.001, p = 0.9
13.5
−88%
d = 16, a0 = 10, no demonstrations in hand
