
(a) A PROMPT, READ AS BAYESIAN INFERENCE
description: w ≈ m
x1, y1
x2, y2
· · ·
xn, yn
x ?
a prior: w is near m
demonstrations that update the posterior
predict y
THE DESCRIPTION'S ESS
description
=
x1, y1
· · ·
xt, yt
t = ESS: the number of demonstrations that lower the error as much as the description does
(b) PRIOR ON w • TRUE TASK
ESS (DEMONSTRATIONS)
each | is one demonstration
τ = 1
p = 1
m
broad, reliable
15.6
e.g. "Write this report as an accountant."
τ = 0.1
p = 1
m
specific, reliable
117
e.g. "Write this report in these ten steps: …"
τ = 0.1
p = 0.9
1 in 10
m
specific, 90% reliable
13.5
e.g. the same steps, about the wrong task one time in ten
